# Farmers Medium of Communication for Support Price of Crops

Farmers support price of crops is a web application which is useful for farmers to sell  
under the guidance of

Ramamurthy

6 CME, Department of Computer Science,  
CHRIST (Deemed to be University)

Farmers support price of crops is a web application which is useful for farmers to sell and buy crops at a good price.

Nowadays the main issue for farmers is getting a good price for their crop so this creates a medium between farmers and buyers.

Farmers faced the problem of getting low price for their crops because of the medium between buyers and sellers , in which the farmers used to go to the centers with their crop and wait for their turn to sell this take long time and instability of day to day price.

Aim of this project is as follows:

- \*Establish a modeling framework.
- \*Develop innovative, complementary agriculture monitoring systems.
- \*Develop medium of communication between farmer and buyer of crops.
  
- \*Admin-Looks after the website.
- \*Login-Login
- \*Signup-Register
- \*Buyer-Buy the crops
- \*Seller(Farmer)-Sells the crops.
- \*Contact us-Helpline

- \*List of prices-Daily prices of each crop.

- \*HTML

- \*PHP

- \*CSS

- \*MY SQL

- \*XML

- \*JAVASCRIPT

In this application , farmers will register and login into the application and provide the crop details which they want to sell. After submitting all those details of the crop will be available for buyers and buyers can bid the desired amount so that the farmers will get proper price to the crop.

Farmers have good medium through this application and they can decide the price of the crop .
